Assembly

Say goodbye to junk-yard rear end housings. Mark Williams Enterprises has perfected an economical modular 9" Ford aluminum rear end housing setup that can be used for drag racing and street applications. The key element is the reinforced aluminum housing center module cast from a special grade aerospace alloy with an outstanding tensile strength of 60,000 psi (30% higher than 6061). The modular concept allows a variety of end bells and mounting brackets to suit your particular application. Price wise, the MW Modular stacks up favorably to the considerable re-working needed to OEM units or the labor intensive fabricated steel housings. But the most important consideration is that the MW Modular housing is a completely CNC machined assembly

and is extremely accurate. There is zero stress from bending and welding typical to sheet metal rears. It assures you of a housing that is properly aligned for optimum internal efficiency. The modular unit is also upgrade-able, if, at a later date a class change requires full floating hubs or the width needs to be changed, the appropriate end bells can be bolted on, eliminating cutting and welding. The newest addition to our modular line is the Econo/Comp 4 link housing (shown at right). It incorporates special chromoly 4 link brackets and spacers along with a tubular lower tie bar. These new components make it easier than ever to convert a MW modular solid mount dragster housing to a 4 link set-up. Component interchange-ability is guaranteed with this precision unit.
