The MW Modular 9" Pro 4-link housing is an outstanding choice for the suspended rear racecar. All 4 link brackets are CNC machined from 7075 aircraft alloy aluminum. The layout of the 4-link attachment points is the same as used by the leading pro stock chassis builders.

Units are available in both floater and flange type axle configurations. Unique design features include indexing lugs on each 4-link bracket that positively lock inner and outer brackets to each other and to the housing. This insures perfect alignment of all components and eliminates the possibility of the housing and thirdmember shifting between the brackets. To further strengthen the assembly, aluminum cross tie bar is used to secure the 4-link brackets to the bottom of the housing. The housing also has provisions for either upper or lower wishbone attachment along with shock and wheelie bar mounts. Holes in the 4-link brackets accommodate rod ends with 5/8" cross-holes. Standard housing has a 37" wheel-to-wheel width and 20" 4 link centers. Others widths are available (see charts on page 53 & 54).
